

`model-card:ncd-asthma:monolith:v1`

Asthma Monolith

This card describes the current asthma model structure used for the CR1 run.

Identity

Composition record	<code>composition:ncd-asthma:monolith:asthma-cr1:v1</code>
Subject	<code>ncd-asthma:monolith</code>
Runtime	2025-2046; synchronous iterations 10
Signature	84602acbc52af6dd7297a569faf9d3444322834f7bed7c936b91894b0af16fbf

Components

Component	Role	Contract
Asthma monolith	Single executable model	Demographic, epidemiology, tobacco, clinical intervention, burden, economic, and resource logic are held in one model JSON.

Use and limits

The asthma model runs asthma epidemiology, selected clinical interventions, tobacco risk-factor effects, and downstream burden, resource, and economic event streams.

The modular composition is currently rejoined into one executable model for the Rust runtime. The run certificate records what was run; it does not encode future comparison intent.
